

Attending the conference was an excellent opportunity for me to learn about the latest research and clinical practices in paediatric and congenital cardiology and share my work regarding cardiac function in children with Pompe disease. I was able to attend keynote lectures, symposiums, and share information with cardiologists regarding cardiac disease in a rare and often overlooked disease such as Pompe disease. This was a valuable opportunity to increase awareness and understanding of this condition. I want to express my gratitude for the support provided by SSIEM, which allowed me to attend this important event and gain knowledge that will benefit my professional development.
